

Re-turn worn shafts and roll journals on-site in hours.

The PL4000 Portable Lathe bolts directly to the end of the work piece and enables the operator to cut grooves, or re-turn straight and tapered shafts with precision.

Low Profile

- Requires only 12.75 inches (323.8 mm) of radial turning clearance so you can work in tight spots.

Powerful and Precise.

- Performs all turning operations along 24.75 inches (628.7 mm) of shaft. Cuts tapers up to 2.5 inches per foot (63.5 mm per 304.8 mm) on diameter.
- Turns shafts from 8.0 - 24.0 inches (203.2 - 609.6 mm). (This machine works within a 12.0 inch (304.8 mm) diameter space around the shaft, and 24.0 inches (609.6 mm) from the end of the shaft, or 27.0 inches (685.8 mm) with optional extender.)

SET-UP

The Portable Lathe mounts to the shaft via a mounting plate which is drilled and counter-bored to match the shaft. The lathe spindle then mounts to the plate on four studs. The turning bar mounts to arms on the main body and can be easily adjusted for reach and turning radius.

Parallelism between the bar and the spindle is set by adjusting two tool arm anchors until they measure equidistant from measuring flats on the main body. Parallelism with the work piece is set using jacking screws. Set screws provide centering.

Typical set-up time is 30 minutes (once the mounting plate is prepared).

A simple cam and valve arrangement activates the pneumatic tool feed mechanism.

The turning bar may be set at an angle for cutting tapers up to 2.5 inches/foot (63.5 mm/304.8 mm) on diameter.

All dimensions should be considered reference. Contact your Climax Representative for precision dimensions. Specifications are subject to change without notice. There are no systems or components on this machine that are capable of producing hazardous EMC, UV or other radiation hazards. The machine does not use lasers nor does it create hazardous materials such as gasses or dust.
